Controle de Versão Sem Subversion

```
if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {  
  
    java.io.File file = db.getSelectedFile();  
    String file_name = file.toString();  
  
    try {  
        ReadFile file_read = new ReadFile(file_name);  
        String[] aryLines = file_read.OpenFile();  
        int i;  
        String theText = "";  
        for (i=0; i < aryLines.length; i++) {  
            theText = theText + aryLines[i] + '\n';  
        }  
  
        taOne.setText(theText);  
    }  
    catch (java.io.IOException e) {  
  
    }  
}
```

Controle de Versão Sem Subversion

Não sabemos...

qual alteração foi feita!

quando foi feita!

quem fez!

Controle de Versão Sem Subversion

```

if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {
    java.io.File file = db.getSelectedFile();
    String file_name = file.toString();

    try {
        ReadFile file_read = new ReadFile(file_name);
        String[] arylines = file_read.OpenFile();
        int i;
        String theText = "";
        for (i=0; i < arylines.length; i++) {
            theText = theText + arylines[i] + '\n';
        }

        taOne.setText(theText);
    }
    catch (java.io.IOException e) {
    }
}
    
```

```

if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {
    [Redacted]

    ReadFile file_read = new ReadFile(file_name);
    String[] arylines = file_read.OpenFile();
    int i;
    String theText = "";
    for (i=0; i < arylines.length; i++) {
        theText = theText + arylines[i] + '\n';
    }

    taOne.setText(theText);
}
catch (java.io.IOException e) {
}
}
    
```

```

if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {
    [Redacted]

    ReadFile file_read = new ReadFile(file_name);
    String[] arylines = file_read.OpenFile();
    int i;
    String theText = "";
    for (i=0; i < arylines.length; i++) {
        theText = theText + arylines[i] + '\n';
    }

    [Redacted]
}
}
    
```

```

if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {
    java.io.File file = db.getSelectedFile();
    String file_name = file.toString();

    [Redacted]

    taOne.setText(theText);
}
catch (java.io.IOException e) {
}
}
    
```

```

if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {
    java.io.File file = db.getSelectedFile();
    String file_name = file.toString();

    [Redacted]

    taOne.setText(theText);
}
catch (java.io.IOException e) {
}
}
    
```

Controle de Versão Sem Subversion

“A alteração feita pelo primeiro usuário não contém as informações feitas pelos outros usuários”

“Não temos histórico das alterações”

Controle de Versão Com Subversion

```
if (returnVal == javax.swing.JFileChooser.APPROVE_OPTION) {  
  
    java.io.File file = db.getSelectedFile();  
    String file_name = file.toString();  
  
    try {  
        ReadFile file_read = new ReadFile(file_name);  
        String[] aryLines = file_read.OpenFile();  
        int i;  
        String theText = "";  
        for (i=0; i < aryLines.length; i++) {  
            theText = theText + aryLines[i] + '\n';  
        }  
  
        taOne.setText(theText);  
    }  
    catch (java.io.IOException e) {  
  
    }  
}
```

Controle de Versão Com Subversion

- Banco de dados apenas com as alterações e não todo documento;
- Sabemos quem, quando, o que e porque foi realizada a alteração;
- Comparar revisões diferentes (diff);
- Voltar para versão anterior sem perder a atual;
- Backup automático;
- Gerenciamento de qualquer tipo de documento.

Projetos Open Source

Como usar?

Tortoise SVN

Subclipse (eclipse)

RapidSVN Portable

Tortoise Browser

The screenshot shows the TortoiseBlame application window. The address bar displays the path `X:\TortoiseSVN\src\TortoiseBlame`. The left sidebar shows a tree view of folders, with `src` expanded to show subfolders like `crashrpt`, `ResizableLib`, `Resources`, `ResText`, `SubWCRev`, `SVN`, `TortoiseBlame`, `TortoiseLang`, `TortoiseMerge`, `TortoisePlink`, `TortoiseProc`, `TortoiseShell`, `TortoiseSVNSetup`, `TSVNCache`, and `Utils`. The main pane displays a list of files with columns for Name, Author, SVN Status, and SVN Revision. A context menu is open over the `TortoiseSVN` folder, showing options like `Open`, `Scan with OfficeScan Client`, `SVN Update`, `SVN Commit...`, `TortoiseSVN` (expanded), `UltraEdit-32`, `WinRAR`, `Send To`, `Cut`, `Copy`, `Create Shortcut`, `Delete`, `Rename`, `Properties`, `Diff`, `Show Log`, `Repo-Browser`, `Check for Modifications`, `Revision Graph`, `Update To Revision...`, `Rename...`, `Delete`, `Revert...`, `Get Lock...`, `Branch/Tag...`, `Switch...`, `Merge...`, `Blame...`, `Create Patch...`, `Help`, `Settings`, and `About`.

Name	Author	SVN Status	SVN Revision

Subclipse

The screenshot shows the Subclipse 'SVN Repository Exploring' window. The left sidebar displays a tree view of the repository structure, including 'branches', 'tags', 'trunk', and a subdirectory 'subclipse' containing 'book', 'book-f', 'core', 'featur', 'javahl', 'test', 'ui', 'update', 'svnant', 'svnClientA', and 'www'. The 'core' folder is selected, and a context menu is open over it, listing actions such as 'New', 'Show in Resource History', 'Create Unified Diff', 'Checkout...', 'Export...', 'Import...', 'Rename/move...', 'Branch/Tag...', 'Copy', 'Paste...', 'Delete...', 'Copy URL to Clipboard', 'Properties', and 'Refresh View'. The 'Checkout...' option is highlighted by the mouse cursor.

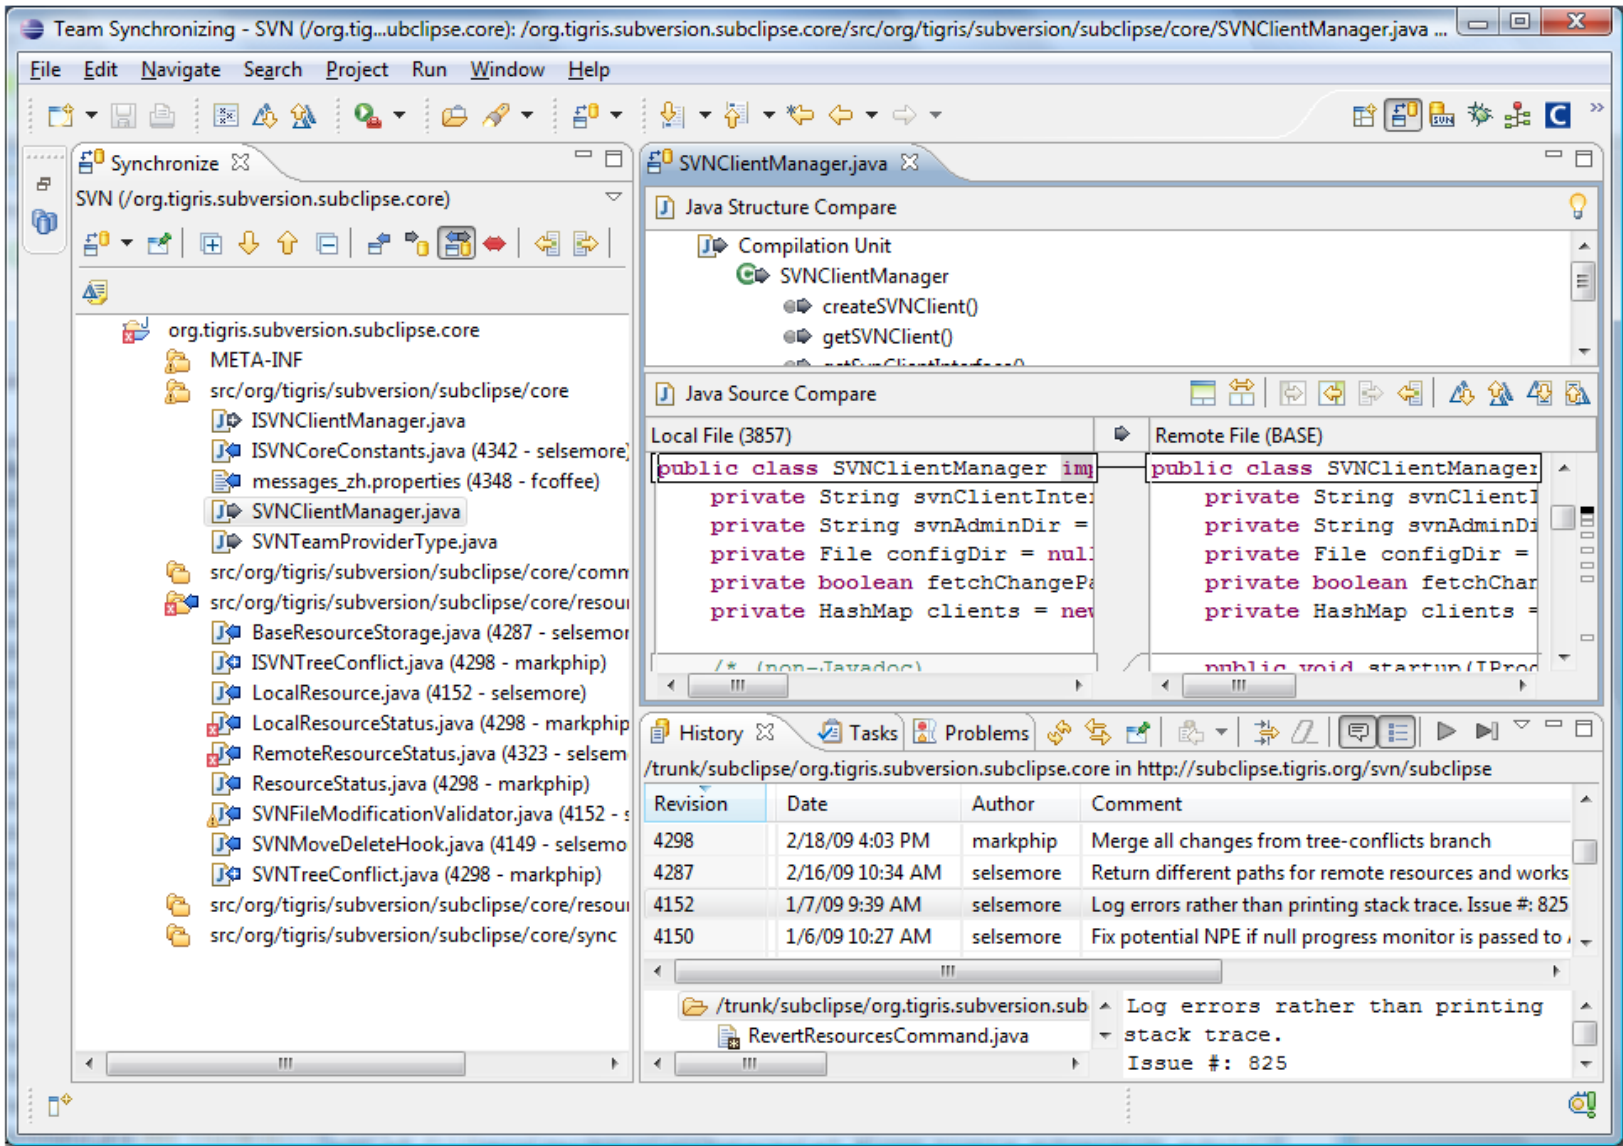

The 'SVN Resource History' window is also visible, displaying a table of revision history for the 'core' directory:

		12/1/05 10:53 AM	markhip	Added a workaround for "svn:author an...

Below the table, a snippet of commit comments is visible, including: 'Milestone 1 of new branch/tag support.', 'Added support for a new subclipse:tags property that contains a list of values in this format:', and 'revnum, tag_name, relative_path, b... branch/tag'.

The status bar at the bottom indicates the current path: `/trunk/subclipse/core` in `http://subclipse.tigris.org/svn/subclipse`.

Subclipse

The screenshot shows the Subclipse IDE interface. The left sidebar displays the project structure for 'org.tigris.subversion.subclipse.core'. The main editor area shows a comparison between a local file (revision 3857) and a remote file (BASE) for 'SVNClientManager.java'. The code comparison highlights differences in the class definition and private fields.

Local File (3857)

```
public class SVNClientManager implements SVNClientInterface {
    private String svnClientInte
    private String svnAdminDir =
    private File configDir = null
    private boolean fetchChangePa
    private HashMap clients = new
```

Remote File (BASE)

```
public class SVNClientManager {
    private String svnClientI
    private String svnAdminDi
    private File configDir =
    private boolean fetchChar
    private HashMap clients =
```

History

Revision	Date	Author	Comment
4298	2/18/09 4:03 PM	markhip	Merge all changes from tree-conflicts branch
4287	2/16/09 10:34 AM	selsemore	Return different paths for remote resources and works
4152	1/7/09 9:39 AM	selsemore	Log errors rather than printing stack trace. Issue #: 825
4150	1/6/09 10:27 AM	selsemore	Fix potential NPE if null progress monitor is passed to

RapidSVN Portable

The screenshot shows the RapidSVN application window. The title bar reads "RapidSVN". The menu bar includes "File", "View", "Create", "Modify", "Query", and "Help". Below the menu bar is a toolbar with various icons. The main area is divided into two panes. The left pane shows a tree view of the file system, with the "src" directory under "/home/alex/work/rapidsvn" selected. The right pane displays a table of files with the following columns: Name, Revision, Last change, Status, and Prop Status.

Name	Revision	Last change	Status	Prop Status
Makefile.in	3301	3297	normal	normal
report_dlg.cpp	3301	2833	normal	normal
